

# Check newest source

Xcode 4.5

The screenshot shows the Google Code page for the 'core-plot' project. At the top, there's a logo for 'core-plot' with the tagline 'Cocoa plotting framework for OS X and iOS'. Below this is a navigation bar with links: 'Project Home', 'Downloads', 'Wiki', 'Issues', and 'Source'. The 'Source' tab is selected. Under the 'Source' tab, there's a 'Repository:' dropdown set to 'default', followed by links for 'Checkout', 'Browse', 'Changes', and 'Clones'. A 'How-to: Explore this project' link is also present. Below the navigation bar, there's a section titled 'Create your own clone' with the text 'Create a clone of the core-plot repository hosted at Google Code. [Learn more](#)'. A 'Create a clone' button is located below this text. Further down, there's a section titled 'Command-line access' with the text 'Get a local copy of the core-plot repository with this command:'. A rounded rectangle contains the command: `hg clone https://code.google.com/p/core-plot/`.

# Install hg for (Mountain) Lion
